PROFESSIONAL PROFILE

Junior Backend Developer focused on Node.js backend development, REST APIs, data integration and automated testing. Builds hands-on personal projects with JavaScript, Node.js, Express, PostgreSQL/Supabase and MongoDB, including financial-data workflows, API integrations, validation, security controls and modular service architecture.

Brings nearly 12 years of analytical and operational experience from Banco Galicia, including data validation, process compliance and cross-functional coordination - experience that translates well to building reliable backend systems.

Seeking a Junior / Trainee Backend role where practical backend skills and continuous learning can contribute from day one.

TECHNICAL SKILLS

Backend: JavaScript, Node.js, Express.js, REST / RESTful APIs

Databases: PostgreSQL, Supabase, MongoDB

Testing: Jest, Supertest, unit, integration, E2E, contract and smoke testing

APIs & Security: Axios, external API integrations, JWT authentication, role-based access, rate limiting, Zod validation, sanitization

Tools: Git, GitHub, npm, Linux, environment configuration

Additional: React, HTML, CSS, Tailwind CSS, WordPress

Currently Learning: TypeScript, backend refactoring and modularization

SELECTED SOFTWARE PROJECTS

Betty - Financial Market Analysis Backend

Personal Project | 2023 - Present

Technologies: JavaScript, Node.js, Express.js, Axios, Zod, Jest, Supertest, external APIs, Git/GitHub

- Develops a modular Node.js / Express backend for financial-market analysis, external-data ingestion and trading-signal orchestration.
- Integrates and normalizes market, macroeconomic and financial-news data from external providers for downstream analysis and configurable decision rules.
- Implements service/controller layers, validation contracts, middleware, sanitization, rate limiting and pre-trade operational gates.
- Maintains 178 passing automated tests across unit, integration, E2E, contract and smoke testing using Jest and Supertest.
- Includes sentiment analysis, technical-analysis modules, backtesting, journaling and notification/orchestration services developed incrementally through Git-based sprints.

WhatsApp Sales Automation Bot

Personal Project

Technologies: JavaScript, Node.js, WhatsApp API, PostgreSQL, Supabase, Mercado Pago, JWT

- Built an end-to-end conversational sales workflow for customer onboarding, product browsing, order creation, delivery details and payment selection through the WhatsApp API.
- Uses PostgreSQL on Supabase for persistent catalog, product and order data, with administrator tools for dynamic product and price management.
- Integrated Mercado Pago, automated administrator notifications and an order-status workflow from preparation through dispatch and delivery.
- Planned improvement: modular refactor and progressive JavaScript-to-TypeScript migration.

PROFESSIONAL EXPERIENCE

Banco Galicia - Argentina

Banking Operations & Analysis | 2012 - 2023

- Managed regulated operational processes requiring accuracy, traceability and strict compliance with internal, legal and procedural requirements.
- Analyzed financial and operational data, validated transactions and documentation, identified discrepancies and prepared decision-support reports.
- Resolved cross-functional issues across customer service, clearing, logistics and judicial-process workflows under deadline-sensitive conditions.

Operational Roles - Italy

2024 - Present

Current winery-cellar operations role; previous McDonald's kitchen and goods-receiving experience. Demonstrated adaptability, teamwork and adherence to quality and safety standards in fast-paced operational environments.

EDUCATION & TRAINING

Coderhouse - Full Stack Development / Web Development Training | 2023

Nuclio Digital School - Introduction to Full Stack Development | 2023

UTN FRBA, Centro de e-Learning - Web Programming | 2018

Escuela Técnica Raggio - Electronic Technician, Telecommunications Orientation | Completed

LANGUAGES

Spanish: Native

Italian: Professional working proficiency

English: Intermediate - able to read and write technical documentation
